

The American Society for Microbiology launches on ChronosHub with enhanced article submissions

Copenhagen - The American Society for Microbiology (ASM) has launched on the ChronosHub platform, enabling the first ASM authors to use ChronosHub's manuscript submission service. The ChronosHub platform allows ASM authors to submit their manuscripts quickly and easily, using the platform's AI metadata extraction to reduce manual work, while benefiting from guidance for funder policy compliance and APC quotation, including discount and waiver eligibility during submission.

The platform also verifies, corrects, and enriches the metadata it extracts by matching it against identifiers, thereby solving issues upstream and avoiding unnecessary manual work later in the process. After the submission is processed, ChronosHub sends the manuscript and all the metadata to ASM's peer review system, eJournalPress.

"Our team at ASM has worked closely with the ChronosHub team to have our submission forms configured in line with our requirements – that is never an easy task," says David Haber, Publishing Operations Director. "For this set up, both parties have also worked closely with the team at eJournalPress, to make sure submissions done on ChronosHub can be ingested into our peer review system. It's been a labour of love but we're very excited to see our first journals launch, with others following soon."

"We're very excited to have ASM as the second publisher to go-live with our submission service," says Christian Grubak, CEO and founder of ChronosHub. "It's been an exciting journey and we're looking forward to extending this service to others soon too."

The American Society for Microbiology is live on ChronosHub with submissions for [ASM Case Reports](#) and the [Journal of Clinical Microbiology](#). The service will be expanded to other ASM journals throughout the rest of 2025.

About ChronosHub

Headquartered in Copenhagen, ChronosHub is an online platform meeting the needs of all stakeholders in the research community: publishers, institutions, funders, and researchers. ChronosHub supports authors to select suitable journals for their manuscript submissions by making funding policies and institutional agreements transparent. ChronosHub streamlines the publishing workflow for publishers, institutions, and funders for effective APC management, funding policy compliance, automated repository deposits, and OA reporting.

About the American Society for Microbiology

The American Society for Microbiology is one of the largest professional societies dedicated to the life sciences and is composed of 36,000 scientists and health practitioners. ASM's mission is to promote and advance the microbial sciences.

ASM advances the microbial sciences through conferences, publications, certifications, educational opportunities and advocacy efforts. It enhances laboratory capacity around the globe through training and resources. It provides a network for scientists in academia, industry and clinical settings. Additionally, ASM promotes a deeper understanding of the microbial sciences to diverse audiences.
